Source: Android Central Best Android Go phones Android Central 2020 There are affordable Android phones, and then there are Android Go phones. Android Go devices are designed to be as cheap as possible and run a special version of Android that is specially made with lower specifications in mind. These are the best Android Go phones, which can be great start or backup phones, including the Ulefone Note 7 as our best overall choice. Source: Ulefone The best Android Go phone is one you've probably never heard of, but we think it's the best overall choice, all things considered. It's the Ulefone Note 7, and it's a pretty impressive handset if you take into account the price tag. The Ulefone Note 7 immediately stands out for its design. The 6.1-inch screen has incredibly slim bezels and a water drop-notch at the top for its 5MP selfie camera. Compared to the other phones on this list, it's really something. At the back you will also find an impressive array of three cameras, allowing for a lot of shooting possibilities. Specs-wise, the Ulefone Note 7 is offering a 3,500 mAh battery, 16GB of expandable storage (up to 64GB), 1GB of RAM, and dual SIM slots if you want to use two phone numbers at once. We also appreciate the rear-mounted fingerprint sensor and facial unlocking functionality. Even better, you get a free case with the phone! Modern water drop display Triple cameras on the back Very generous 3500 mAh battery Storage is expandable to 64GB Comes with a free case Only 16GB base storage 1GB RAM This is the one to get In total the Ulefone Note 7 stands out as the best Android Go phone. It has a modern design, a huge battery, and more. Source: HMD Global HMD offers many options if you're interested in the best cheap Android phone, and the Nokia 1.3 is a continuation of those efforts in the entry-level segment. The phone comes with Android 10 (Go Edition) out of the box, has a large 5.7-inch HD+ screen with a water drop cutout and slim bezels, and a generous 3,000mAh battery. You'll also get an 8MP rear camera, 1GB of RAM and 16GB of internal storage, a microSD slot that can hold up to 400GB of storage, and the Qualcomm 215 platform delivers reliable performance. HMD says the device is ready for Android 11, with an update rolling out as soon as the Go edition of Android 11 is available. The design itself follows Nokia's minimal industrial design aesthetic, and you get a 3.5mm headphone jack here. The best thing about the Nokia 1.3 is that it is officially available in the US and works with T-Mobile, AT&T and a wide range of MVNOs. HD+ screen with small bezels 16GB of internal storage All-day 3000mAh battery Android 10 (Go Edition) out of the box Available in one The ideal option for MVNOs If you're on an MVNO or need an entry-level phone for use with a large provider, the Nokia 1.3 is the ideal choice. Source: Alcatel Alcatel is also in the Android Go game, and the latest offering is the Alcatel 1. The The display is great for one-handed use, but compared to the Ulefone Note 7, the bezels are noticeably larger. You get 8GB of storage from the box, and while it's excellent that Alcatel allows you to expand it with a microSD card, we want it to go beyond the maximum of 32GB. While it may sound silly to say this for a phone that costs as little as the Alcatel 1 does, the real draw to this phone is the camera experience. You get a 5MP rear camera and 2MP selfie camera, and while there's nothing special about the sensors themselves, Alcatel has packed a lot of features into the phone's camera app. There is a Photo Booth mode that captures four photos in three seconds in a photo booth-like setup. There's also an Instant Collage feature that lets you easily create a collage of your photos and a one-handed mode that takes all the camera controls to the lower part of the screen. The Alcatel 1 is available in a trio of colors (black, blue and gold) and supports 4G LTE connectivity. Please note that this is an international device, which means it does not come with a warranty and may have some connection problems in rural or overcrowded buildings. Modern 18:9 screen Many camera features Expandable storage 4G LTE support Available in multiple colors No U.S. Warranty Max storage of 32GB Make great photos on the cheap The Alcatel 1 is loaded with all sorts of features and settings in the camera app, making it a great choice for shutterbugs. Source: Samsung Samsung is one of the most popular phone makers out there, and it hasn't ignored the Android Go market. The Galaxy J2 Core is the Samsung-made Android Go phone that we recommend you get, with the biggest benefit being a large amount of expandable storage. As with most Android Go devices, the Galaxy J2 Core has only 8GB of on-board storage. However, you can use a microSD card to extend it to an impressive 256GB. That's more than enough space for all your favorite movies, music, games and more, making this an excellent choice for anyone who likes to store all their files locally. In addition to excellent storage, the J2 Core also shines with its sleek design, three available colors and a 2600 mAh battery. As long as you don't mind the missing warranty and weaker LTE coverage in rural parts of the country, the Galaxy J2 Core is a robust Android Go option. Expandable storage up to 256GB large 2600 mAh battery Simple design Three colors FM radio Has no guarantee Potentially irregular network support Lots of space for all your files Should you store lots of apps, games and movies on your phone? You can cover the expandable storage of the Galaxy J2 Core up to 256GB. Source: ZTE ZTE makes a lot of cheap Android phones, so it wouldn't be such a the company has an Android Go offering. The ZTE Blade L8 debuted in April 2019 and has taken a big hit. The thing that helps the phone stand out the most is the design. Although it is made of all the other phones on this list, the reflective back makes it possible to glisten and shine when the light hits. It is also available in two colors, including a sleek black and beautiful blue. The Blade L8 is a quad-core processor, 1GB of RAM and a 2000 mAh battery. You get 16GB of storage right out of the box, and if you need to, you can expand it to 128GB with a microSD card. There's also an 8MP rear camera, along with a 5MP front camera for all your selfies. This is another international phone, and as mentioned earlier, the biggest drawback of this is the fact that the ZTE Blade L8 doesn't come with an official warranty in the U.S. Reflective back looks great 16GB internal storage Quad-core processor 8MP camera at the back A standout option stand out from the crowd with the ZTE Blade L8, with a reflective back that is available in two beautiful colors. Source: Nokia Last but certainly not least we have the Nokia 1 Plus. It's a fantastic entry in the Android Go family, but unfortunately you can't buy it in the U.S. If you happen to live in Europe or any other market where the phone is sold, then you're in for a real treat. The Nokia 1 Plus delivers a large 5.45-inch screen, an 8MP rear camera and a 3D Nano-patterned polycarbonate shell that looks excellent. Also offered with the phone is 1GB of RAM, 8GB of internal storage that can be extended to 128GB, and a 2,500 mAh battery. You get a lot bang-for-your-buck, so if you're able to buy the Nokia 1 Plus, it's definitely a phone worth watching. Textured plastic back Large 5.45-inch screen Relatively slim bezels 8MP camera on the back 2500 mAh battery Live in Europe? Download this If you happen to live in Europe, you owe it to yourself to view the Nokia 1 Plus. This thing is an insane value. We don't think you'll go wrong with any of the phones on this list, but if we had to choose just one to recommend, it would be the Ulefone Note 7. Compared to a lot of other Android Go phones out there, we should give Ulefone a lot of credit for the modern design of the Note 7. This doesn't look like a phone that costs as little as it does, and that's largely due to the bezel-like display and three rear cameras on the back. Appearance is not everything, but they definitely help. The Note 7 isn't packed with the most impressive specs in the world, but there's plenty to make sure you have a reliable daily experience. The 3,500 mAh battery should provide excellent endurance, with a microSD card slot for expandable storage is always appreciated, and the fingerprint sensor makes it easy to log into your sensitive apps. For the price Ulefone asks, the Note 7 is a hit.
